

Security Awareness Training

The cybersecurity awareness training solution offered by Secure ISS empowers organisations to defend against cyber threats by educating their personnel and by doing so, reduce their attack surface.

Our solution teaches organisations and employees of the dangers of operating in a cyber connected world, what to look out for, how to be cyber aware and reduce the risks associated with potential threats to the organisation.

Secure ISS have partnered with NINJIO Aware to deliver engaging Hollywood-style videos and have found the approach informative whilst enjoyable, different to many other training offerings.

Why is this platform different?

The content is delivered in short videos and knowledge reinforced through follow-up quizzes and emails along with optional phishing activities. Comprehensive reporting ensure that outcomes and learning can be measured across the organisation.

How long should I engage for?

The training is continuous, meaning new content is delivered every month. However, for those looking at a minimum period for training, we would recommend a minimum of 6 months.

NINJIO has turned the blended learning space into a fun and fresh environment all while teaching the lessons needed to get across.

GARTNER PEER INSIGHTS™ – Overall rating of 4.9/5, 98% would recommend

Security Awareness Training

Here's what to expect

Secure ISS work with your organisation to provide initial baseline training by selecting 6 – 8 topics from the NINJIO back catalogue. This occurs over the first 4 – 6 weeks of the engagement to get your teams up to speed.

Once the initial training blocks have been completed, we then move to a monthly cadence, with the content tailored to current trends, situations and topics relevant to the current threat landscape. As an example:

WEEK ONE
One monthly animated 3-4-minute video. Fresh content released every 30 days. After completing the monthly video, the user receives a certificate with a link to the related NINJIO blog. In turn, the blog contains links and articles related to the monthly video the end user just watched.
WEEK TWO
End users receive a quick infographic which they can consume in about 30 seconds and highlights the teachable moments from the video they watched the week prior. Keeping the teachable point front of mind.
WEEK THREE
End users receive an anchoring cartoon which they can consume in about 10 seconds. The anchoring cartoon contains a quick rhyme again related to the video viewed in week 1.
WEEK FOUR
This is the beginning of hype week; this is where the end user receives a movie style poster promoting the next topic. This gets the user involved and engaged, anticipating the next video and starting to think about the upcoming topic. These posters can be printed out and hung around the workplace or home – creating “buzz” about the next month’s topic.

Pricing

Pricing is from \$3.50 per user (Ex GST), per month, volume discounts apply, plus a nominal setup fee based upon your organisation's size.
